

AI Ethics & Transparency Statement

Public-facing AI Ethics & Transparency Statement

Our mission

Write in a Click helps writers plan, draft, and refine books faster - while keeping humans in control of creative decisions.

How our AI helps

We provide idea generation, structure suggestions, language guidance, and research scaffolding. You choose what to keep, change, or discard.

Transparency & fairness

We disclose when AI is used, explain key features in plain language, and continuously test for bias and quality. You can report concerns and request human review of flagged cases.

User control

You own your projects. You can export or delete them at any time and manage sharing and privacy settings. Use of your content to improve our systems is **opt-in**.

Algorithmic nature of outputs

All suggestions are generated by algorithms, not authored by humans. They may contain errors or outdated references and should be reviewed before publication.

Intellectual property & privacy

We respect IP. Do not prompt the system to reproduce copyrighted text beyond fair use. We store your work securely and do not use it for training unless you explicitly opt in.

Continuous improvement

We audit models, update safeguards, and incorporate community feedback to improve ethical behavior, clarity, and creative usefulness over time.

Owner-protection notes

- **Ownership & license:** Users retain IP in their outputs. They grant Write in a Click a limited, revocable license to host, process, and back up their content to provide the service.
- **No guarantee of originality:** We cannot guarantee outputs are unique or free of third-party rights. Users are responsible for legal review and compliance before

publishing.

- **Prohibited prompts/uses:** No requests for personal data extraction, plagiarism, or unlawful content. We may suspend accounts that violate policies.
- **No professional advice:** Outputs are for creative assistance and educational purposes only and do not constitute legal, medical, or financial advice.
- **Third-party providers:** We may use vetted model providers and infrastructure vendors under data-processing agreements; details available in our privacy notice.
- **Training opt-in:** User content is excluded from training/fine-tuning by default; explicit opt-in is required and can be withdrawn at any time.
- **Takedown process:** We maintain a clear channel for IP complaints and takedown requests and will act promptly upon verified notices.
- **Security:** Industry-standard encryption, least-privilege access, and routine audits are used to protect user data.
